

Establish a New Standard of Care

Our innovative family of products enable healthcare workers to safely and economically administer respiratory treatments and procedures in a portable negative pressure environment.*

Respiratory Shield System
Patent Pending

Endoshield System
Patent Pending

Protect your Team

From pre-hospital treatment to ER to hospital admittance and discharge, patient care takes a small army of healthcare professionals. The COVID pandemic inspired the emergency room physicians at SafER Medical to develop a family of products to help protect those who put other's needs first with an innovative defense against exposure and spread of airborne contaminants that can take healthcare workers off the front lines.

SafER Treatment and Transport

Medical Professionals ranging from paramedics to doctors and nurses to home healthcare providers and forward trauma management teams can turn any ambulance, emergency room, urgent care center, hospital, or other settings into a negative pressure environment.

* CFD analysis / white papers available upon request.

Vacuum Solutions

SafER Medical vacuum solutions include a free-standing medical device for hospital/clinic use and a portable AC/DC ruggedized soft bag system for patient transport and pre-hospital use. Both solutions utilize ULPA filtration - included with each of our single-patient-use shield systems.

Endoshield System

The SafER Endoshield provides negative pressure protection for healthcare workers. The Endoshield is designed to be used with most manual and video laryngoscopes.

Treatments and Procedures:

- Endotracheal Intubation and Extubating
- Endoscopy
- Bronchoscopy
- Bag Valve Mask Ventilation
- Tracheostomy Care

Respiratory Shield

The SafER Respiratory Shield provides negative pressure protection for healthcare workers. The Respiratory Shield is designed to fit with most right angle and straight valve Positive Airway Circuits.

Treatments and Procedures:

- Nebulizer Administration
- CPAP / BiLevel Administration
- Noninvasive Positive Pressure Ventilation
- High Flow Oxygen Delivery
- Bag Valve Mask Ventilation
- Endoscopy
- Oral/Nasal Specimen Collection
